

Intercom & entry · system

SPACE video intercom system

One system at the entrance: talk, see and open the door.

SI-WJZ7 · SI-PJW7 · SI-KR10

Illustrative image, screen switched off.

Real-life example

A three-stairwell housing estate, 9:40 pm. A courier rings flat 0802 from the station at stairwell B. Ewa sees him on her hallway monitor and opens the door with one touch.

If nobody answers, the monitor saves a photo of the visitor and the courier can call the gatehouse instead. The porter talks on the console handset, sees the station's camera image and lets the courier in. Residents walk in with their face or a card, no keys needed.

Key functions

Intercom and access control together

The same station greets visitors and lets residents in by face, card or PIN code.

Runs on the building network

Video calls, entrance view and door release run on the building's local network, even when there is no internet.

The gatehouse has it all at hand

The handset console takes calls from stations and flats, shows the entrance cameras and opens the door.

Visitor photo

If nobody answers, the in-flat monitor saves a photo of the person who rang.

Keeps an eye on the door

The station alerts the gatehouse if the door is left open or someone tries to pry it off the wall.

Cards and faces managed in SpaceEngine

Residents' cards and faces are added and removed remotely from the SpaceEngine platform, in the same system as SPACE locks.

Specifications

System components	SI-WJZ7 door station, SI-PJW7 in-flat monitor, SI-KR10 gatehouse console
Network	building Ethernet TCP/IP
Entry methods	face (with liveness check), proximity card, PIN code
Offline operation	yes: calls, video and door release on the local network
Integration	SpaceEngine platform: remote adding and removing of cards and faces
Deployment	device selection, network design, installation and commissioning by SPACE
Warranty	12 months. We tailor warranty periods to the client's needs and tender requirements.

System devices (samples).

Works with the SPACE system

The door station, monitors and console talk over the building's local network. Residents' cards and faces are added and removed remotely from the SpaceEngine platform, in the same system as SPACE locks and terminals.

Ordering

- Price on request: we will quote for your building.
- Device selection, network design, installation and commissioning by SPACE or an authorised installer.
- Before go-live we set unique passwords and the site configuration.
